

Specifications

Equipment	K.T.S Manure Fork 1.0 m	K.T.S Manure Fork 1.5 m	K.T.S Manure Fork 2.0 m
Working width, CC outermost tines	1 500 mm	1 500 mm	2 000 mm
Length of tine, outreach from frame	750 mm	750 mm	750 mm
Dimension of tines	36 mm	36 mm	36 mm
Forged steel tines	Yes/standard	Yes/standard	Yes/standard
Tine attachment	Cone with nut	Cone with nut	Cone with nut
No. of tines	5	7	9
CC between tines	250 mm	250 mm	250 mm
Height of frame	540 mm	540 mm	540 mm
Weight including SMS/Trima attachment	95 kg	140 kg	185 kg

Equipment upper jaw See above for bottom part	K.T.S Crocodile 1.0 m	K.T.S Crocodile 1.5 m	K.T.S Crocodile 2.0 m
Length of tine, outreach from frame	490 mm	490 mm	490 mm
Type of tine, upper jaw	Forged steel tines	Forged steel tines	Forged steel tines
No. of tines	4	6	8
CC between tines	300 mm	276 mm	276 mm
Distance from joint to CC tine attachment	920 mm	920 mm	920 mm
Weight, complete including SMS/Trima attachment	170 kg	255 kg	355 kg

K.T.S Manure Fork/Crocodile

- K.T.S Manure Forks/Crocodiles are extensible and flexible. The 1.5 m manure fork is the base in a system where the tool can be extended and changed for various needs.
- If you change to a bigger tractor you can extend the manure fork to 2.0 m working width. Mounting the upper jaw and changing the loader attachments are naturally easily done and it will not cost you any more if you do it later.
- Bolted exchangeable attachments make it easier and cheaper the day you change your tractor or front loader. It is also possible to mount attachments so that the manure fork or crocodile can be used in the 3-point hitch, both at the rear of the tractor and for the front lift.

- K.T.S Manure Fork 1.5 m is the base in a very flexible system.
- The tines of the fork are made of forged special steel for maximum strength.

- The upper jaw has a very large opening in order to simplify loading of deep-straw beds, ensilage, brushwood etc.
- The upper jaw is very substantial in order to withstand heavy loads. The cylinder is positioned in the middle for an even distribution of the pressure. Thicker cylinders for loaders and tractors with lower hydraulic pressure are available as extra equipment.

- The K.T.S Crocodile is perfect for spreading deep-straw beds. The upper jaw holds the material in a firm grip, in order to make the loading easier.

- With the K.T.S Crocodile it is also possible to take out ensilage from a trench silo.
